

ThermaBind L.grain Cover 1.5mm Rbl

Transparent front 150mic with LeatherGrain back 250gsm

IB451003

Overview

With the GBC ThermaBind™ system, you can achieve a perfect-bound 'paperback book look' in seconds to give your documents a truly professional, 'published' feel. The secret lies in the unique, pre-formed ThermaBind™ Covers containing a high contact adhesive strip. The glue penetrates into the fibres of the paper to form a totally secure spine and permanently bound pages that are great for filing, stacking and mailing. It's a quick, clean process with no need for fiddly holes, tapes or fasteners. All ThermaBind™ Covers come with 150-micron transparent front covers for easy reading of the title page. You can then choose from three types of white back covers (Standard, Optimal or PET) or two types of embossed finishes – LinenWeave™ or LeatherGrain™ - enabling you to customise documents to suit the content, your audience and your company image.

Description

With the GBC ThermaBind™ system, you can achieve a perfect-bound 'paperback book look' in seconds to give your documents a truly professional, 'published' feel. It's a perfect example of a complicated professional bindery process made simple for the office user. The secret lies in the unique, pre-formed ThermaBind™ Covers which come loaded with a high contact adhesive strip. The glue penetrates firmly into the fibres of your sheets to form a

totally secure 'spine', exactly like a paperback book. The spine is integrated into the cover itself to form one unique piece, making the process simple, clean and quick with no need for fiddly holes, tapes or fasteners. The profile of the glue strip is designed in a 'U' to ensure that the first and last pages are in contact with the adhesive for 100% page security, making ThermaBind™ ideal for legal, contractual and personnel documents. Whatever the size of your document, just follow the easy, 3-step ThermaBind™ process to ensure the best results. Simply: 1. Collate all your pages and square them up carefully before inserting them into the correct capacity of ThermaBind™ Cover. 2. Place the collated pages and covers into the unit which must be at 'ready' temperature status. The exact duration of each bind will depend on the model of thermal binder used. 3. Wait for the binding process 'completion signal' then allow the bound document to cool to ensure maximum bond strength before use (approximately 30 seconds depending on the room temperature).
