Statement: Compatibility of Delica Café Royal capsules with the Nespresso® Original machines

Dears,

Our company Delica is the producer of Café Royal capsules. Being Nespresso®* Original compatibles, our capsules are extensively proofed and tested on the correspondent Nespresso®* Original set of machines available on the markets. This is why we declare the compatibility of our capsules only for these Original machines.

Functionality of different machine with different capsules

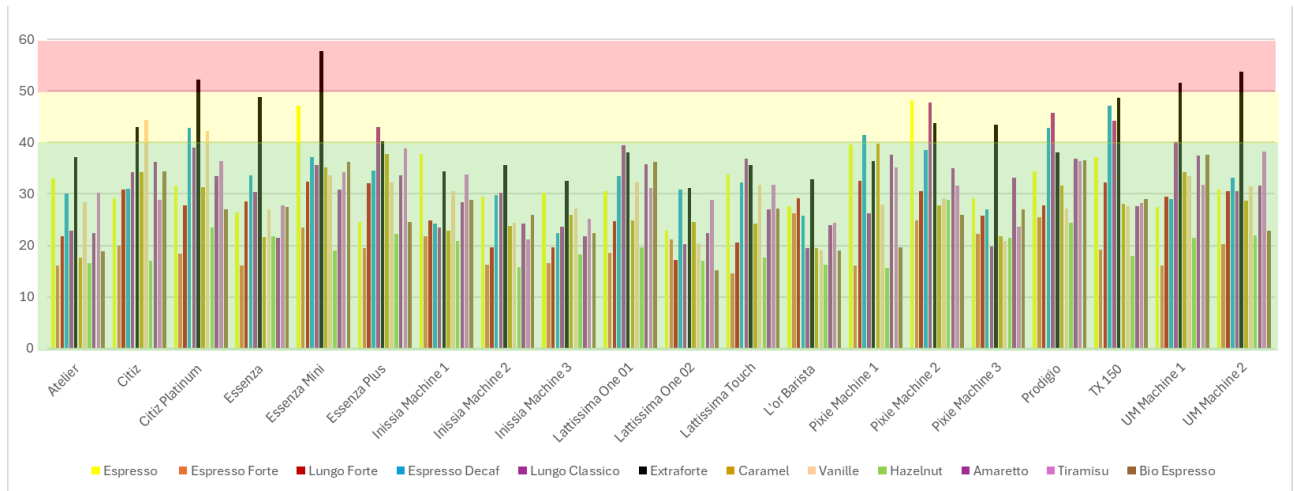

The capsules have been tested on 20 different Machine types with 12 different capsules. Following all machines and capsule types are listed. Total 1500 extraction tests were made.

Extractions time of the new capsules

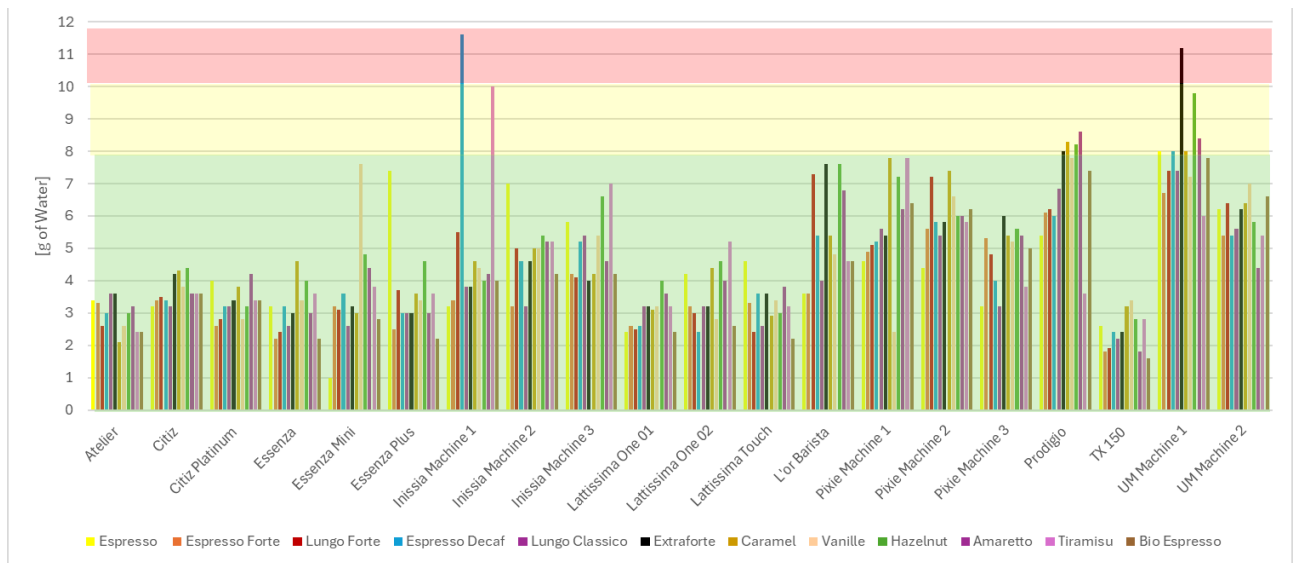

The extraction time was measured on 60 ml beverage. No capsule were over 60 seconds. All the extraction times are within the expected range.

Most of the extraction were below 45 seconds. Only the extraction of the decaf and some flavoured coffees are slightly higher up to 50 seconds for the 60ml. This is usual as the coffee powder is denser and the water needs more time to get through the capsule. The Extraforte is normally extracted as a Ristretto (25-50ml) and therefore also is slightly higher for the extraction of 60 ml.

Backleaking

It was tested how much water was leaked back in the tray. This shows whether the machine closes tightly around the capsule. In general, the water which was leaking back in all Machines was very low. Even for the older machines like a Prodigio, TX150 or an UM, the backleaking is within the tolerances below 12 g.

Conclusion:

Our extensive tests showed very good compatibility of the Café Royal capsules with the range of Nespresso®* Original machines: the good results obtained in the extraction time and backleaking guarantee to the end consumers a very positive and tasteful experience with the Café Royal capsules.

Kind regards

Olivia Looser
